

AMENDMENTS TO THE CLAIMS:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently amended) Fluid delivery system for showers, comprising:

a diffuser having a first conduit with a terminal section that flows into at least one opening provided on the diffuser, for the delivery of a fluid jet in a preferential direction;

a flush-mount box support on which is mounted a light source; and

a second conduit provided on the diffuser, with a terminal section that leads into at least one outlet for emission of a beam of light produced by the light source and oriented essentially in parallel with the aforementioned preferential direction; and

the terminal sections of the first and second conduits ~~have~~ having at least one common wall which segregates the light beam from the fluid prior to delivery of the fluid jet;

wherein said diffuser is entirely contained inside the overall dimension of the flush-mount box support.

2. (Previously presented) Fluid delivery system according to claim 1, wherein the second conduit runs at least partially

inside the first conduit.

3. (Previously presented) Fluid delivery system according to claim 2, wherein the light source is external to the first conduit and isolated from the fluid.

4. (Previously presented) Fluid delivery system according to claim 1, wherein the at least one opening for the delivery of the fluid jet and the at least one opening for the emission of the beam of light are aligned on a same wall of the fluid delivery system.

5. (Previously presented) Fluid delivery system according to claim 4, wherein the light source is mounted in alignment with the second conduit.

6. (Previously presented) Fluid delivery system according to claim 5, wherein the second conduit is tapered and a cross-section of the tapered second conduit decreases in size in a direction moving away from an interior thereof and towards the at least one opening for the emission of light.

7. (Previously presented) Fluid delivery system according to claim 6, wherein the second conduit is delimited by waterproof

walls which completely seal and segregate the second conduit from an interior of the first conduit.

8. (Previously presented) Fluid delivery system according to claim 7, wherein the second conduit has at least one transparent wall.

9. (Currently presented) Fluid delivery system according to claim 1, wherein the ~~first and second conduits are mounted on a~~ support is equipped with a fitting for the light source.

10. (Canceled)
